

Leo Zhang

Dear Orion Health Hiring Manager,

I am applying for Orion Health's Technical Graduate Programme. As a graduate of AUT's Master of Computer and Information Sciences (First Class Honours) with 10+ years of production software experience, I am drawn to this programme because it combines software engineering, systems integration, and real healthcare impact — exactly the kind of work where my breadth adds value.

I bring strong Java skills from 8+ years building Spring Cloud microservices and enterprise backends, along with hands-on experience in JavaScript, TypeScript, SQL, AWS, Docker, Git, and Linux — all technologies your programme highlights. What sets me apart is not just the technical depth but the ability to pick up new domains quickly: I moved from industrial IoT to AI research and delivered a published multimodal system (IVCNZ 2025) within 18 months.

Orion Health's mission to improve healthcare through smart digital solutions resonates with me. I want to apply my engineering discipline, curiosity, and collaborative approach to health-tech challenges — contributing to real projects from day one while growing my skills across the three rotations.

I would welcome the opportunity to discuss how my background can contribute to Orion Health's engineering team. Thank you for your time and consideration.

Kind regards,

Leo Zhang
