

Leo Zhang

Dear HCL New Zealand Hiring Manager,

Full-stack software engineer with 10+ years shipping production software across Java backends, React/Node.js front ends, and AI integrations. Specialized in enterprise delivery to diverse clients — clear APIs, sensible integration, and releases that land when field conditions are messy. Proven delivery spans web applications, cloud deployment on AWS, and AI/ML workflows from prototype through production support. Experienced in participating in technical discussions, improving architecture and scalability, and owning feature work end to end. Master's in Computer and Information Sciences from Auckland University of Technology, First Class Honours.

I am drawn to the Software Developer role because it demands the kind of work I do best. What sets me apart is that I've delivered across Android, Java backends, Vue.js frontends, and AI/ML integrations — which means I can own a feature from database to UI without handovers. In fast-moving teams, that reduces dependencies and speeds up iteration. I see the emphasis on Java, TypeScript in your JD, which maps directly to experience I can apply immediately.

I am drawn to HCL New Zealand because it focuses on building practical technology that delivers real value. The work your team is doing in this space is exactly the kind of challenge I want to invest my next chapter in — building something that matters, with people who set high standards.

I would welcome the chance to discuss how my experience can contribute to HCL New Zealand's engineering team. Thank you for your time and consideration.

Kind regards,

Leo Zhang
