

Leo Zhang

Dear Hays - Fintech Client Hiring Manager,

Master of Computer and Information Sciences (First Class Honours) from AUT. Software Engineer with 10+ years of experience building Android applications, enterprise systems, IoT platforms, and cloud-connected solutions. Strong expertise in Kotlin, Java, Jetpack Compose, MVVM, Coroutines, Android SDK, REST APIs, and scalable application architecture. Combines extensive industry experience with postgraduate research in Artificial Intelligence to deliver intelligent, maintainable, and business-focused software products.

I am drawn to the Senior Software Developer - Android role because it demands the kind of work I do best. What sets me apart is breadth: I've shipped Android apps that talk to hardware, microservices, and cloud backends — not just standalone UIs. I understand the full stack my mobile code lives in, which means fewer integration surprises and faster delivery. I see the emphasis on development and Android in your JD, which maps directly to experience I can apply immediately.

I am drawn to Hays - Fintech Client because it connects skilled professionals with leading global organisations, matching engineering expertise with roles that have real enterprise impact. The work your team is doing in this space is exactly the kind of challenge I want to invest my next chapter in — building something that matters, with people who set high standards.

I would welcome the chance to discuss how my experience can contribute to the fintech organisation's mobile engineering team. Thank you for your time and consideration.

Kind regards,

Leo Zhang
