

Leo Zhang

Dear Umbrellar Technology Group Hiring Manager,

AI engineer with 10+ years across applied AI, computer vision, and full-stack delivery, grounded in shipping production software. Specialized in LLM-style applications and vision pipelines from early prototypes to runnable workflows. Proven work includes multimodal and vision-language systems with research-backed iteration and deployable inference constraints. Additional expertise includes PyTorch workflows, API integration, and AI-assisted programming tools. Master's in Computer and Information Sciences from Auckland University of Technology, First Class Honours.

I am drawn to the AI Software Engineer role because it demands the kind of work I do best. I also do the engineering side properly — clean code, testing, CI/CD, API design. I don't just understand models; I can build the pipeline around them. I see the emphasis on data, model in your JD, which maps directly to experience I can apply immediately.

I am drawn to Umbrellar Technology Group because it focuses on building practical technology that delivers real value. I have built computer vision systems for face recognition and defect detection, deployed AI models on edge devices with sub-second latency, and published research at IVCNZ 2025 — experience that bridges the gap between prototype and production.

I would welcome the chance to discuss how my experience can contribute to Umbrellar Technology Group's engineering team. Thank you for your time and consideration.

Kind regards,

Leo Zhang
