

Leo Zhang

Dear Datacom Hiring Manager,

Full-stack software engineer with 10+ years shipping production software across Java backends, React/Node.js front ends, and AI integrations. Specialized in enterprise delivery to diverse clients — clear APIs, sensible integration, and releases that land when field conditions are messy. Proven delivery spans web applications, cloud deployment on AWS, and AI/ML workflows from prototype through production support. Experienced in participating in technical discussions, improving architecture and scalability, and owning feature work end to end. Master's in Computer and Information Sciences from Auckland University of Technology, First Class Honours.

The Principal Developer role aligns with my background in embedded engineering, where I have consistently delivered production systems that balance technical quality with practical results. I see the emphasis on applications and systems in your JD, which maps directly to experience I can apply immediately.

I am drawn to Datacom because it is one of New Zealand's largest tech companies, delivering real solutions across diverse industries. The work your team is doing in this space is exactly the kind of challenge I want to invest my next chapter in — building something that matters, with people who set high standards.

I would welcome the chance to discuss how my experience can contribute to Datacom's engineering team. Thank you for your time and consideration.

Kind regards,

Leo Zhang
